

IN THE ABSTRACT OF THE DISCLOSURE:

Please replace the Abstract of the Disclosure with the following amended abstract, a clean copy of which is appended to the end of this Amendment:

ABSTRACT OF THE DISCLOSURE

~~The present application relates to a~~ A method of making a glass panel that is partially printed with a plurality of layers in the form of a print pattern which subdivides the panel into a plurality of discrete printed areas and/or a plurality of discrete unprinted areas, said the layers being in substantially exact registration. ~~The substantially exact~~ Exact registration is achieved by the application of a plurality of superimposed layers to a sheet of glass ~~of a plurality of superimposed layers~~. ~~One layer contains, one of the layers containing~~ a ceramic ink comprising glass frit, ~~in a print pattern~~. ~~The glass sheet and layers~~ sheet of glass and plurality of layers applied thereto are subjected to a heat treatment process which causes the glass frit to fuse to the glass and bind at least one other layer of ink within the print pattern. ~~Any ink not within Ink outside the print pattern is burnt off and/or vaporised during the heat treatment process~~ process and/or removed by a subsequent finishing process, to leave the desired layers in substantially exact registration within the print pattern.
